

Companies running an IT-infrastructure aim at a proper balance of performance & availability vs. cost. However, IT-infrastructure and in particular SAP application landscapes are often oversized. Lupus Consulting developed a tool-based approach to significantly decrease the cost of running SAP.

Rightsize SAP operations

Proven methodology to optimize Enterprise Architectures

Typical achievements after right sizing project:

- Reduced infrastructure cost (20-40%)
- Streamlined IT-architecture

Achievements after Performance Optimization:

- No technical bottlenecks
- No bottleneck on business processes
- Reduction of peak processor load by 30% - 35%
- Reduction of top SQL activities by 50% - 70%

Further achievement after a Data Management project:

- Decrease of DB by 20-40%
- Reduction of monthly DB growth of up to 50%

Rightsizing step-by-step

Main steps	Activities
1. Assessment	Analysis of IT-landscape, DB, utilization and performance metrics
2. Performance Optimization	Quick-wins and optimization of source code
3. Data Management	Quick-wins and archiving
4. Rightsizing	
<ul style="list-style-type: none"> • Design of resized IT-infrastructure 	Optimize parameters and resource allocation
<ul style="list-style-type: none"> • Performance testing 	Volume test with LoadRunner
<ul style="list-style-type: none"> • Go-live and Hypercare 	Fine-tune solution

Our focus is deeply rooted in the improvement of business processes and its underlying IT-architecture. We follow a **TCO based approach** and aim at **cost savings**. Our expertise is stretching across industries from **banking to manufacturing**.
