

Lupus Consulting combines both worlds - SAP and Atlassian! Get the best of both ecosystems with fully consistent data and seamless process integration.

Being the **only global SAP consulting firm & Atlassian Gold Partner** we are capable to integrate both systems and realize various scenarios. The combination of both global players increases the flexibility and agility in your systems.

Integration Approach

Discovering opportunities to save manual work and automate business processes across the two ecosystems.

Design the solution via SAP Middleware, Atlassian Apps, web-services, API, etc.

Change Management, implementation, data synchronisation, support and development

Benefits

COST OPTIMIZATION

Seamless integration reduces manual mistakes, duplicated data administration and license costs. Depending on company's need, we help to select the best cost – benefit solution.

PROCESS OPTIMIZATION

The integration of both systems closes gaps in the processes and a direct integration ensures end-to-end business processes.

USER AWARENESS

After integration, users benefit from using only one leading system.

EXPERTS ALL IN ONE

Our team combines certified SAP and Atlassian experts.

QUALITY ASSURANCE

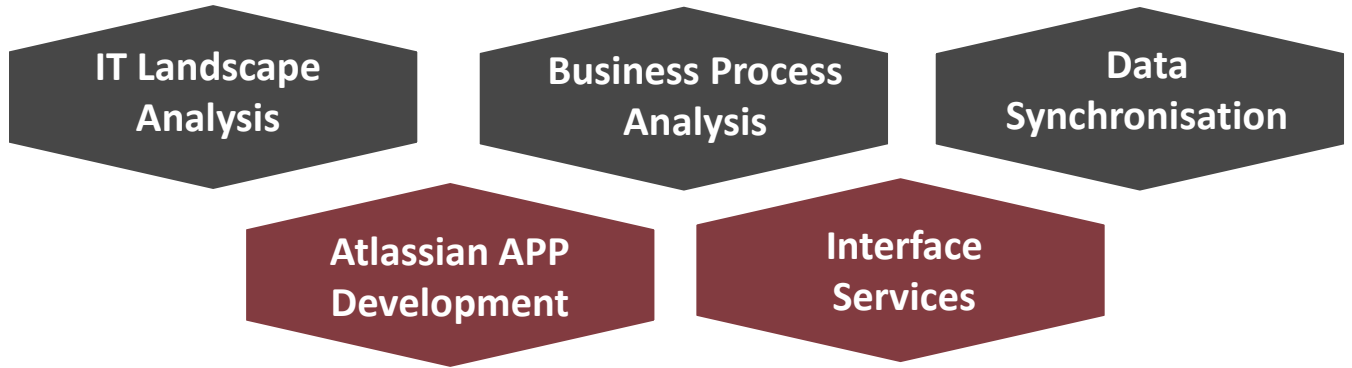

Our expertise is based on best-practices, industry expertise and recognized experts.

DATA CONSISTENCY

All data are stored and processed safely in the leading system.

SAP and Atlassian Integration Services

Integration Use Cases

Human Resources

Onboarding sheets including personal assets (mobile phone, laptop, car, etc.), which are managed in SAP but assigned to employees in the Atlassian Jira instance.

Trainings, certifications, etc. can be synchronized with the HR system (SAP).

Recurring maintenance of machines is synchronized with Jira to plan the maintenance e.g. changing tires on company cars.

A maintenance order is submitted (via SAP) and the responsible person gets a task on their Jira Task Board.

Maintenance

Reporting

SAP data extracted as e.g. MS Power BI or Excel reports are published automatically as Atlassian Confluence page. All end-users keep track of the reporting and get notified of any changes.

Please note: reports may be subject to SAP licensing model.
